Education

Carnegie Mellon University, **School of Computer Science**, Pittsburgh, PA — Expected Spring/Summer 2027
PhD in Robotics — GPA: 4.23

Carnegie Mellon University, **School of Computer Science**, Pittsburgh, PA — Awarded August 2023
Master of Science in Robotics — GPA: 4.23

Cornell University, **College of Engineering**, Ithaca, NY — Awarded May 2017
Bachelor of Science in Electrical and Computer Engineering — GPA: 3.73

Research Experience

Kantor Lab - Carnegie Mellon University Robotics Institute, Pittsburgh, PA — August 2021 – Present
Research in Robot Learning, Computer Vision, 3D Reconstruction, and Imitation Learning.

- Currently researching cross-embodiment learning from human demonstrations to transfer policies across camera viewpoints and embodiments.
- Developed a framework to convert egocentric human demonstrations into robot wrist-view observations and action trajectories to train diffusion policies using foundation models and Gaussian Splatting. Paper accepted to CoRL 2026.
- Developed a transformer-based method for temporal association of fruits. Paper accepted to IROS 2025.
- Designed a next-best-view planner and robust estimation and graph clustering approach to size small fruit. Paper accepted to ICRA 2024.
- Created a method to build high-quality 3D reconstructions of sorghum panicles. Paper accepted to ICRA 2023.

AirLab - Carnegie Mellon University, Pittsburgh, PA — August 2020 – July 2021
Research in multi-drone collaboration for 3D human reconstruction.

- Contributed to the 3D reconstruction pipeline for research on human pose estimation for collaborative aerial cameras. Utilized deep pose estimation networks and multi-view reconstruction algorithms on real and simulated data. Paper accepted to IROS 2021.

Professional Experience

NVIDIA, Santa Clara, CA — May 2026 – August 2026
Computer Vision and Graphics Intern

- Fine-tuned NVIDIA Nemotron-3-Nano-Omni AVLMs using SFT and LoRA for video understanding and captioning.
- Designed an end-to-end pipeline for multimodal data preparation, distributed training, inference, and evaluation using NeMo AutoModel and Megatron-Bridge.
- Evaluated against frontier models, with the fine-tuned AVLM achieving ~20% higher captioning performance and ~10% higher multiple-choice video understanding accuracy.
- Optimized large-scale AVLM training using FSDP, tensor and expert parallelism, sequence packing, CPU offloading, and activation recomputation.

Amazon Robotics, Boston, MA — May 2025 – August 2025
Applied Science Intern

- Researched machine learning–based clustering methods to improve multimodal multiple extended object tracking.
- Designed a transformer-based clustering approach for multimodal inputs, building the entire system from scratch and establishing evaluation metrics and tests.
- Achieved 99% AMI, ARI, and ACC metrics on simulated datasets, demonstrating high accuracy and robustness with a 5% improvement over existing systems.
- Demonstrated qualitative success on real-world data.

Advanced Optronics, Pittsburgh, PA June 2024 – August 2024
Machine Learning Intern - Advised by Professor Wenzhen Yuan

- Experimented with different machine learning models for 3D reconstruction of cochlear implant device shape and prediction of surgical complications from strain sensor readings.
- Designed experiments, tests, and error metrics to evaluate the performance with different levels of noise.
- Created a method to augment the dataset of 3D cochlea models using statistical shape models, deformable registration, and several 3D processing techniques.
- Improved method to simulate strain sensors using barycentric coordinates of tetrahedral meshes. Strain readings fell within 1% error of expected values with high-resolution meshes and 2% for low-resolution meshes used in simulation.
- Designed a learning-based method to optimize sensor placement on the device.

Amazon AWS AI Devices, Palo Alto, CA August 2020 – August 2021
Senior Software Development Engineer

- Senior embedded software engineer for AWS Panorama – a machine learning appliance that allows IP cameras to run computer vision and deep learning applications at the edge.
- Developed multi-threaded and multi-process application-level software that ran on the device. Supported the full application lifecycle from OTA to deployment to inference which allowed customers to run custom applications.
- Led the design and development of the entitlement and encryption service, a service which utilizes MQTT to communicate with the cloud and securely manages the IP of 1P and 3P applications.
- Contributed to the development of the data source service to allow customers to stream data from RTSP cameras and video files in real time.

Eversight, Palo Alto, CA July 2019 – August 2020
Software Engineer

- Improved price recommendation system speed by 80% by re-designing backend container-driven system architecture using Kubernetes and Google Cloud Platform. The system could effectively scale and process resource-heavy tasks, including processing millions of transaction records daily and optimizing in-store prices using customer data.
- Led the architecture design that loaded customer data into our system using a scalable event-driven architecture and Apache Beam, reducing the time of the overall process by 50%.

Edelman Financial Engines, Sunnyvale, CA April 2018 – July 2019
Senior Software Engineer

- Developed an online financial planning tool to provide a new medium for financial advisors to offer financial advice.
- Led the design of a microservice to automate the migration of customer data from a competitor's platform to ours.
- Led the design of a report generation service to aggregate customer information and present likelihood of retirement goal success.

MacDonald, Dettwiler, and Associates, Vancouver, BC August 2017 – March 2018
Embedded Software Engineer

- Acted as part of a small research and development team whose goal was to determine the feasibility and performance of implementing SAR image processing algorithms on FPGAs for real-time sea vessel detection and classification.
- Improved classification and detection speed by three orders of magnitude by successfully constructing embedded RTL designs in C and VHDL to implement SAR signal processing algorithms.
- Evaluated performance of system with regard to memory, time, and quantization constraints.

Skills

Programming Languages	Python, C++, C, MATLAB, Java
Frameworks and Tools	PyTorch, Docker, Hugging Face, Nemotron
Machine Learning	VLMs, Deep Learning, Imitation Learning, Reinforcement Learning
Computer Vision	Gaussian Splatting, NeRF, 3D Reconstruction, Vision Foundation Models, Segmentation
Cloud Platforms	AWS, GCP, Kubernetes
Robotics Software	ROS, Gazebo, PyBullet, MoveIt, AirSim

Relevant Graduate Coursework

Deep Learning for Robotics	Learning for 3D Vision	Computer Vision
Introduction to Robot Learning	Learning-based Image Synthesis	Graduate Artificial Intelligence

Service

- CMU Master of Science in Robotics Admissions Committee (2025 and 2026 admission cycles)
- CMU Graduate Application Support Program Mentor
- CMU RoboBuddies Mentoring Program

Teaching Experience

- Teaching Assistant, 16-385 Undergraduate Computer Vision — August 2024 – December 2024
- Teaching Assistant, 16-720 Graduate Computer Vision — January 2024 – May 2024

Talks and Presentations

- IROS 2025 Oral and Poster Presentation (Remote), Hangzhou, China — October 2025
- ICRA 2024 Oral and Poster Presentation, Yokohama, Japan — May 2024
- AIAFS 2023 Oral and Poster Presentation, Washington, DC, USA — February 2023

Conference and Journal Reviewer Experience

Reviewer for International Conference on Robotics and Automation (ICRA), International Conference on Intelligent Robots and Systems (IROS), Robotics and Automation Letters (RA-L), Conference on Robot Learning (CoRL)

Other Projects

Graduate

- Investigated deep reinforcement learning methods to learn a unified policy that controls a quadruped mounted with a camera on a mobile arm with the task of tracking a moving target. The hypothesis is that this configuration enables the robot to explore more complex terrains when compared to using a fixed egocentric camera. Agent is trained using PPO in an Isaac Gym simulated environment.
  [Project Writeup] [Code Repo]
- Applied deep reinforcement learning techniques towards informative path planning for drone mapping. Agent learns an optimal policy to intelligently explore an unknown map and visit areas of high interest. Experimented with both on-policy and off-policy approaches in addition to model-based and model-free algorithms.
  [Project Writeup] [Code Repo]
- Utilized NeuS to create accurate, watertight meshes of plants from sparse 2D images. Models were made generalizable by incorporating Reptile meta-learning into training. Results demonstrate that meta-learning improves reconstructions with fewer training iterations, and our approach is able to generate realistic meshes and novel view syntheses with sparser 2D images compared to naïve approaches.
  [Project Writeup] [Data Repo] [Code Repo]
- Utilized Generative-Adversarial Networks for coarse style and scene data augmentation. Method was based on Swapping AutoEncoders. Results successfully demonstrated that swapping latent style codes is an effective approach for data augmentation to allow models to better generalize and not overfit the training data.
  [Project Webpage] [Code Repo]

Other Activities

Cornell Varsity Squash Team — August 2013 – May 2017

- Competed on the Cornell Varsity Squash Team.
- Captained the team my Senior year. Led and managed the team alongside the coach.
- Played at the number one position Junior and Senior years.
- CSA Scholar Athlete Junior and Senior years.
- Three-time recipient of team sportsmanship award.
- Two-time recipient of team most improved award.
